hypothetical protein F6N23.7 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 12-Feb-1999 #sequence_revision 12-Feb-1999 #text_change 22-oct-1999
C;Accession: T01233
R;Geisel, C
R;Geisel, C
R;Description: The sequence of A. thaliana F6N23.

N.Alternate names: hypothetical protein LPB11c
C.Species: Saccharomyces cerevisiae
C.Species: Saccharomyces cerevisiae
C.Jaccesion: S63462
R.Wang, Y.; Ahmed, A.; Bussey, H.; Fortin, N.; Friesen, J.D.; Hall, J.; Storms, R.K.; Submitted to the EMBL Data Library, September 1995

                                                                                                                                                                      Mol. Ceil 5:865-876(2000).

-!- FUNCTION: Protease that catalyzes two essential functions in the SUMO pathway: processing of full-length SWT3 to its mature form and deconjugation of SWT3 from targeted proteins. Has an essential role in the G2/M phase of the cell cycle.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C48.
                                                                                               X-RAY CRYSTALLOGRAPHY (1.6 ANGSTROMS) OF 401-621 IN COMPLEX WITH SMT3. MEDLINE-20337970; Pubmed=10882122;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel human secreted proteins which are encoded by polynucleotides obtained from fetal brain, adult skin, adult brain, adult thymus and adult acrta cDNA libraries. The colling the fetal brain and adult acrta cDNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, hematopoiesis regulating activity, tissue growth activity, hemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumor polynucleotides are also stated to be useful for gene therapy.

AZ43777-Z43808 represent the polynucleotides described in the invention which encode the proteins represented in AAY50905-Y50947.
                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides encoding secreted human proteins, derived from human fetal brain, adult skin, adult brain, adult heart, adult thymus and adult aorta cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pGluPheLeuGlnThrTyrGlySerLeuIleProLeuSerThrAspGluValValGluLy 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosoppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                        The present sequence encodes a human de-sentrinase (SENP) 3 polypeptide. The specification describes SENP1 and SENP2 polypeptides. The SENP1 gene is found in chromosome 12q13.1. SENP1 is found in the nucleolus, SENP3 is found in the nucleolus, and SENP3 is found in both locations. SENP3 is found in both locations. SENP3 polypeptides are sentron-specific proteases that remove sentrin from some sentrinites perificially proteins modified by ubiquitin or NEDB8. SENP polypeptides are used to identify specific modulators of SENP. These modulators are potential anti-proliferative and anti-viral agents such as herpes simplex-1 or cytomegalovirus. SENP polypeptides are used for studying the role of sentrinisation in the blological function of PML, a tumour suppressor implicated in development of acute promyelocytic leukaemia. Fragments of SENP polynucleotides are used as hybridisation probes and amplification primers for detecting gene expression or preparing mutated sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AMOS192-AAD05564 represent cDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode. Drotein genes, and AAE01672-AAE01743 represent the proteins they encode. AAE01744-AAE01763 represent human secreted proteins they encode. C.C. AAE01744-AAE01763 represent human secreted proteins they encode. The secreted proteins and their genes are useful for preventing, creating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the commutations in the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, cc proliferative disorders (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, cardiovascular disorders, cognitive disorders, schizophrenia, asthma, skin disorders, programis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, programicy related disorders, endocrine disorders, programs proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell collure of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and a second and alleviating symptoms associated with the disorders and confers medical associated with the disorders medical medical and proveries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human

(HUMA-) HUMAN GENOME SCI INC.

SM; Ruben Olsen HS, Shi Y, Soppet DR, Komatsoulis G, 

2001-316492/33. P-PSDB; AAE01682 Isolated nucleic acid molecule encoding a human secreted protein is used in preventing, treating or ameliorating a medical condition

Claim 1; Page 417-418; 540pp; English.

AAA AAD05492-AAD05564 represent cDNAs corresponding to 22 human secreted protein genes, and AAE01672-AAE01743 represent the proteins they encode.

CC AAE01744-AAE01163 represent human secreted protein fragments or variants.

CC The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy.

CC The secreted proteins can be diagnosed by determining the amount of the new penes. Specific uses are described for each of the 22 genes, then protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 22 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune disorders, cognitive disorders, schizophrenia, asthma, skin disorders, cognitive disorders, schizophrenia, asthma, skin disorders, cognitive disorders, kidney disorders, gastrointestinal disorders, proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs considers, and inclements, and inclements, and in chambral to partners, and in chambral to partners, and inclements, and in chambral to partners, and in chambral to partners, and inclements, and an a food additive or recentation processing processing properties prometally present stands processing a proders, and inclements, and inclements, and inclements and an exed as a food additive or recentate processing properties prometally processing properties prometally processing properties and properties prometally present stands processing and processing properties and inclements and an exed as a food additive or modelly processing processing processing processing processing processing processing processing processing processing processing processing processing proc present sequence represents a human secreted protein-encoding cDNA of preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA) invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system suppression. Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activition of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, as assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the printed

The Inventor Leadure D. 247.9 inver insuman evaluation and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the three the invention and intionally relates to encompasses polypeptides 90% identical and polynucleotides 95% identical comprision and interest of encompasses polypeptides of enventance of the invention and intional part of the invention and intional antigen comprision buman ovarian antigen and host cells comprising human ovarian antigen polynucleotides and polypeptides in diagnosing, comparing prophosing or preventing various ovary and/or beast related disorders. Such conditions include ovarian cancer and breast rancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, colycystic ovary syndrome, ovarian orysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, cophoritis and vaginitis), immune disorders (e.g., congenital and acquired insorders, espiratory disorders (e.g., anaemia), cardiovascular disorders, coppinges may system disorders. Ovarian antigen polypeptides and corrected polynucleotides may also be used in screening for compounds which conditions may also be used in screening for compounds which conditate ovarian antigen expression or activity. The polynucleotides may also the used for gene therapy, chromosome mapping, in the identification of individuals and in forenic analysis, and the

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system as and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scienosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligounclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonuclectide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence and an oligonucleotide comprises a 3'-end sequence to polynucleotide comprises a 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises as 1-end sequence, where the oligonucleotide comprises and the comprise of the 5'-end sequence/3'-end sequence is selected from those defined in the seculional and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to DNAs assily without any specialized methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SS.
                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tunnour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar to that for N-myc and TrkA genes.
